START IN SCOTLAND. DESIGN FOR NATIONAL REACH.

A proposed Central Belt pilot connecting a digital health experience with qualified clinical services, laboratory testing and pharmacy fulfilment where prescribed.

Prepared for James McGeown. Preferred local partner to approach: Beaumac, Drumchapel. All relationships and commercial terms remain to be agreed.

PREFERRED LOCAL CONVERSATION

The Beaumac opportunity.

Beaumac Medical Aesthetics Clinic and Academy publishes its address as 280 Kinfauns Drive, Glasgow G15 7AR, in Drumchapel. It is James's preferred local partner to approach. No agreement or endorsement is in place. [1]

What its public website confirms

Its published service menu includes skin treatments, microneedling, scalp assessment, PRP hair services and vitamin injections. These establish potential areas for discussion; they do not verify hormone-prescribing competence or demonstrate medical benefit for every patient. [2]

A possible local role

Explore a local hub for consultations, appropriate face-to-face assessment and coordinated referrals. Discuss sample collection only after verifying the actual provider, staff qualifications, clinical governance and laboratory requirements. A suitable hormone specialist must own the hormone assessment and prescribing pathway.

Benefits to discuss with Beaumac

REBASE could bring a relevant new audience, a premium digital front door, coordinated appointment requests, clearer follow-up and less fragmented administration. Any additional services should be chosen independently by the patient and offered within the provider's competence. No patient volumes, revenue or treatment uptake are guaranteed.

Possible extensions

- Skin and scalp consultations, with appropriate onward referral.
- Hair concerns: assessment and discussion of suitable options; no promised regrowth.
- Nutritional concerns: clinician-selected testing and treatment of confirmed deficiencies where indicated.
- General health follow-up and lifestyle support through appropriately qualified professionals.

The first meeting should establish which services Beaumac itself provides, which are supplied by practitioners using its premises, and whether it wants a referral, local-hub or joint-service relationship. Its TRT/endocrinology capability has not been verified.

SOURCED PROSPECTS / NOT APPROACHED

Who to speak to first.

Capabilities below are based on published company information. Suitability, availability, registration scope and willingness to partner require direct confirmation.

1. Beaumac | Drumchapel

Preferred local clinic conversation. Explore the hub and complementary service model on page 2. Hormone prescribing capability is unverified.

info@beaumac.co.uk | 07572 783439

2. Nexus BioLink | Tipton, UK

Kit manufacturer/assembler candidate: custom home blood kits, branded packaging, coding and fulfilment. Its website claims ISO 13485 certification; request the current certificate and scope.

hello@nexusbiolink.com | 01902 228 000

3. Thriva for Partners | UK-wide

Integrated alternative: branded kits, testing infrastructure, laboratory analysis, APIs and clinical-governance options. Ask whether this patient cohort and proposed panels are supported.

Official business enquiry form

4. Amiry & Gilbride | Central Scotland

Publishes a doctor-led TRT service with a clinical network and local sites. Explore clinical/pharmacy responsibilities, recovery expertise and postal supply capability separately.

info@agpharmacy.co.uk

5. Dears Pharmacy | Edinburgh / Fife

Potential east-of-Central-Belt option. Its network page describes blood testing, assessment and TRT services at Stockbridge. Confirm the relevant prescribing entity and fulfilment scope.

info@dearspharmacy.co.uk

6. Ross Hall / Braehead | Glasgow area

Potential specialist referral route. Publishes consultant endocrinology, diagnostics and pathology services. No commercial partnership or post-steroid specialty is assumed.

0141 8103151 | General hospital reception

CENTRAL BELT FIRST

A practical launch model.

The founder proposition

James reports an established business and customer network with reach across the country. The proposed first rollout focuses on Glasgow, Clydebank/Drumchapel, Edinburgh and Stirling, with national expansion as clinical capacity and operating quality allow. Audience size and conversion have not been independently validated.

Two supply routes to compare

- Integrated route: explore Thriva for branded collection, laboratory processing and results infrastructure; agree the clinical and pharmacy services needed alongside it.
- Separate suppliers: explore Nexus BioLink for the kit and fulfilment, appoint a laboratory to validate the collection method and panels, and contract clinical and pharmacy providers. The laboratory remains to be selected for this route.

The patient pathway

- Appropriate assessment and test selection, with verified identity, history and consent.
- Home collection where validated, or a clinician/nurse-collected venous sample when required. Return to the laboratory with traceable sample identification.
- Clinician-reviewed results, a suitable remote consultation and further tests or an examination where needed.
- An individual decision: recovery support, follow-up, referral or treatment if indicated. Pharmacy checks and home delivery only after a valid prescription.
- Agreed monitoring, access to support, and clear escalation for abnormal results or concerning symptoms.

Measure the pilot before scaling

Proposed measures: valid sample rate, turnaround, appointment access, completion of follow-up, patient understanding, complaints, safety incidents, cost per completed assessment and contribution after service costs. Agree targets with providers; do not use prescription volume as the success measure.

Recovery after anabolic steroids is variable. The current endocrine position statement reports limited evidence for pharmacological recovery interventions. TRT is not an automatic recovery treatment and can suppress natural hormone production and fertility. Remote prescribing still requires adequate assessment and safeguards. [9,10]

READY TO ADAPT / NOT SENT

The opening conversations.

Draft approach to Beaumac

Subject: REBASE Health - exploring a Central Belt partnership

Hi Beaumac team,

I'm James McGeown, a Glasgow-based business owner developing REBASE Health, a premium digital health concept. We have an established business and customer network with reach across the country, and I would like to begin with a focused pilot in Scotland's Central Belt.

The initial idea is to support adults seeking medical guidance after anabolic steroid use: appropriate blood testing, clinician-reviewed results, remote consultations where suitable and ongoing care. Any prescribing would be undertaken independently by qualified clinicians, with pharmacy fulfilment only where appropriate.

Beaumac would be my preferred local business to explore this with. Your Drumchapel base and existing skin, scalp and other clinic services could fit a wider local care model. I would like to understand your clinical team, current service scope and appetite for a referral or local-hub partnership.

We have prepared an interactive website and branded kit concept to make the discussion concrete. Could we arrange an introductory meeting to explore responsibilities, the patient journey and a manageable pilot?

Best regards,
James McGeown

Initial enquiry to Nexus BioLink

Subject: REBASE branded home blood collection kit - prototype and quotation

We are exploring a clinician-led health service starting in Scotland's Central Belt, with potential UK expansion. Can you develop a REBASE-branded sample kit using the attached concept, subject to laboratory approval of the collection device, tubes and return system? Please quote prototype costs, minimum quantities, 100/500/1,000-kit pricing, lead times, storage, pick-and-pack and delivery. These quantities are quotation scenarios, not an order commitment.

Please also provide your current ISO 13485 certificate and scope, available collection methods, traceability and expiry controls, postal packaging specification, laboratory compatibility/validation requirements, API options and the split of manufacturer responsibilities. We would like to review a physical sample before any production commitment.

No messages have been sent. Use the published organisational channels on page 3 and share the live partnership demonstration at hellorebasehealth.co.uk/partners. No supplier or patient commitments have been made.

EVIDENCE AND OPEN QUESTIONS

What the proposal relies on.

Research checked on 1 November 2026. These sources establish advertised services and public contact routes; they do not verify a current commercial offer, every professional registration, clinical quality or readiness to participate.

Before accepting real patients

Confirm provider and professional registrations relevant to the service and jurisdiction; clinical ownership and insurance; device/sample validation; lawful health-data processing and security; medical-device status where relevant; pharmacy arrangements; pricing; urgent-result handling; complaints; and continuity of care. A branded kit mock-up is not a validated medical device. [9,10]

Website status

The website is a partnership demonstration built with fictional data. Real payments, samples, laboratory interfaces, prescriptions and deliveries are not connected. REBASE is a working brand; legal/trademark clearance remains to be checked.
